Sheet Index - Civil & Site Plans

Sheet Index - TRU Hotel

Sheet Index - Building 2

Sheet Index - Buildings 3-5

Summary of Design Alternatives (DA)

DA-1: A request to approve a 550' Block Length along Street-1 (south)'.

DA-2: A request to approve a 517' Building Pass-Thru spacing along Street-1 (south).

DA-3a: A request to increase the Depth of the Build-to-Zone at the Service Drive/Novus Lane A-1 Wrap from 10' to 17'.

DA-3b: A request to approve up to 60% Amenity Space as a percentage of the Build-to-Zone Frontage requirement along Street-1 (north side).

DA-3c: A request to increase the Depth of the Build-to-Zone along Novus Lane - Block-2 from 10' to 15'.

DA-4: A request to approve 41% Build-to-Zone Frontage along Street-2 (north side).

DA-5: A request to allow reduced setback from 30' to 10' from proposed R.O.W. (north side) for the proposed parking deck.

DA-6: A request to approve a 50% Build-to-Zone Frontage along Street-2 (south side).

DA-7: A request to approve alternate building step back requirements along the Fordham Street (North) façade.

DA-8: A request to approve alternate building step back requirements along the Hillstone Street (West) façade.

DA-9: A request to approve a 7% ground story transparency along the West building elevation.

DA-10: A request to approve a 4% upper story transparency along the West building elevation.

DA-11: A request to approve an alternate to the principal entrance location requirement

DA-12: not used

DA-13: A request to approve E.I.F.S as a primary material.

DA-14: Exception to Ground Floor Elevation Requirement

Note: Design Alternative dimensions noted are based on historic survey data and are therefore approximate. Adjustments to dimensions may be necessary to reconcile with final survey data.

Design Alternate Summary: A Request to Approve....												
DA-1: ...an increase to a Block Length of 550' (450' required) along Street-1 (south).												
DA-2: ...an increase to a 517' Building Pass-Thru spacing (330' required) along Street-1 (south).												
DA-3a: ...an increase in the Build-to-Zone depth by 5' (from 10' to 17') along Fordham Service Street-Novus Lane wrap.												
DA-3b: ...an increase from 50% to 57% overall (81% in the Type-A1 wrap) in the allowable OAS maximum as a percentage of the Required Build-to-Zone Frontage.(100% for Type-A1 wrap)												
DA-3C: ...an increase in the depth fo the Build-to-Zone from 10' to 15' along Novus Lane Block-2. Increases Facade from 30% to 83% (87% Overall for Novus Ln.)												
DA-4: ...a reduction from 60% to a 41% Overall Build-to-Zone Frontage along Street-2 (north side).												
DA-5: ...a reduced setback from 30' to 10' for the proposed parking deck from the proposed R.O.W. (north side).												
DA-6: ...a reduction from 60% to a 50% Overall Build-to-Zone Frontage along Street-2 (south side).												
Notes:												
Note-1: Street frontage measured to functional limits of street and does not include frontage along Advance Auto boundary.												
Note-2: Street frontage measured to functional limits of street and does not include frontage along Jiffy Lube boundary.

Design Alternate Summary: A Request to Approve....

DA-1: ...an increase to a Block Length of 550' (450' required) along Street-1 (south).

DA-2: ...an increase to a 517' Building Pass-Thru spacing (330' required) along Street-1 (south).

DA-3a: ...an increase in the Build-to-Zone depth by 5' (from 10' to 17') along Fordham Service Street-Novus Lane wrap.

DA-3b: ...an increase from 50% to 57% overall (81% in the Type-A1 wrap) in the allowable OAS maximum as a percentage of the Required Build-to-Zone Frontage (100% for Type-A1 wrap)

DA-3C: ...an increase in the depth fo the Build-to-Zone from 10' to 15' along Novus Lane Block-2. Increases Facade from 30% to 83% (87% Overall for Novus Ln.)

DA-4: ...a reduction from 60% to a 41% Overall Build-to-Zone Frontage along Street-2 (north side).

DA-5: ...a reduced setback from 30' to 10' for the proposed parking deck from the proposed R.O.W. (north side).

DA-6: ...a reduction from 60% to a 50% Overall Build-to-Zone Frontage along Street-2 (south side).

Notes:

Note-1: Street frontage measured to functional limits of street and does not include frontage along Advance Auto boundary.

Note-2: Street frontage measured to functional limits of street and does not include frontage along Jiffy Lube boundary.

Land Use Summary

	Floor Area/Units	Vehicle Parking Required Min/Max	Vehicle Parking Provided	Vehicle Parking Ratio	Bicycle Parking Regd.	Min. Bicycle Parking Provided	Bicycle Parking Provided ST/LT	Notes
Hotel - TRU (43,040 sf)	97 Rooms	87/121 sp	87 sp	.9 sp/key	1 sp/15 units	6 sp	6 sp/2 sp	4-Sty Note-1
Commercial /Office	42,455 sf	142/212 sp	142 sp	1 sp/300 sf	1 sp/2,500 sf	17 sp	14/4 sp	Note-2

'DR' Roadway Light with 'DA' Mini Bell Pedestrian Light Attached

DUKE ENERGY.

Outdoor Lighting

Roadway LED

The Roadway LED is a green solution and great fit for streets, roads, long, narrow areas and parking lots. This energy-efficient luminaire delivers the light where it is needed while increasing visibility and reducing spill light to adjoining properties. Choose low to medium light output on wood or fiberglass poles (or mount on an existing pole). Available with one to four fixtures per pole, depending on the fixture/pole combination selected.

LED *(Light Emitting Diode)*	50 | 70 | 110 | 150 | 220 | 280 watts
Mounting heights	15', 20', 25', 30', 35'
Colors	Bronze Black Gray Green
Poles	Style A, C Wood

Light source: LED *(white)*
Wattage: 50 | 70 | 110 | 150 | 220 | 280
Light pattern: IESNA Type III *(oval)*
IESNA cutoff classification: Full cutoff
Color temperature: 4,000K
Warm-up and restrike time: Instant on *(no warm-up or restrike time)*

Type 'DR' - Duke Energy Roadway Lighting

DUKE ENERGY.

Outdoor Lighting

Sanibel LED

Subject to variance from manufacturer. Contact us for region-specific details.

The beauty of the stylish Sanibel LED is its remarkable versatility. Its sleek simplicity, with a gently curved bracket that helps cast light downward, is at home virtually anywhere – from more formal traditional neighborhoods to beachfront communities and other casual locales.

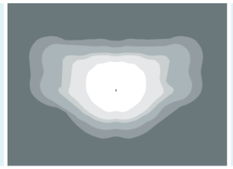
LED *(Light Emitting Diode)*	70 | 150 watts
Mounting heights	15', 20', 25'
Colors	Black Green
Poles	Style A, C

DUKE ENERGY.

Outdoor Lighting

Sanibel LED

Light source: LED *(white)*
Wattage: 70, 150
Lumens: 5,500 | 12,500
Light pattern: IESNA Type III *(oval)*
IESNA cutoff classification: Full cutoff
Color temperature: 4,000K



light distribution pattern

Pole available:

Type	*Mounting height*	*Color*
Aluminum	15', 20', 25'	Black Green

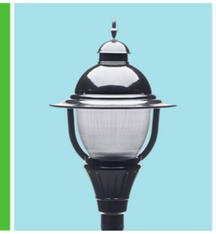
Features	Benefits
No installation cost	Frees up capital for other projects
Design services by lighting professionals included	Meets industry standards and lighting ordinances
Maintenance included	Eliminates high and unexpected repair bills
Electricity included	Less expensive than metered service
Warranty included	Worry-free
One low monthly cost on your electric bill	Convenience and savings for you
Turnkey operation	Provides hassle-free installation and service
Backed by over 40 years of experience	A name you can trust today … and tomorrow

Type 'DA' - Duke Energy Sanibel Arm-Mounted

DUKE ENERGY.

Outdoor Lighting

Mini Bell LED



Subject to variance from manufacturer. Contact us for region-specific details.

The Mini Bell LED is an energy-efficient luminaire with a classic, sophisticated design. This fixture is an excellent choice for illuminating pathways and residential communities.

LED *(Light Emitting Diode)*	50 watts
Mounting height	12', 17' (Style B pole only)
Colors	Black Green
Poles	Style A, B, C, D, E, F
Applications	Neighborhoods Parks

DUKE ENERGY. PROGRESS

Outdoor Lighting

Shoebox LED

The energy-efficient Shoebox LED combines a decorative, contemporary style with versatility and ample lighting effect that is perfect for streets, parking lots, commercial buildings and residential communities. The Shoebox LED provides excellent color rendition along with a controlled light pattern that reduces glare and keeps the light directed only where you want it. Available in black or dark bronze with one to four fixtures per pole.

LED (Light Emitting Diode)	205 watts
Mounting heights	30', 35'
Colors	Black Bronze
Poles	Fiberglass Decorative tapered metal Decorative square metal
Application	Parking lots

Outdoor Lighting

Shoebox LED

Light source: LED *(white)*

Wattage: 205

Replacement for:* One 400-watt metal halide Shoebox; two Shoebox LEDs needed to replace one 1,000-watt metal halide Cube

Lumens: 20,555 – 21,803 *(fixture dependent)*

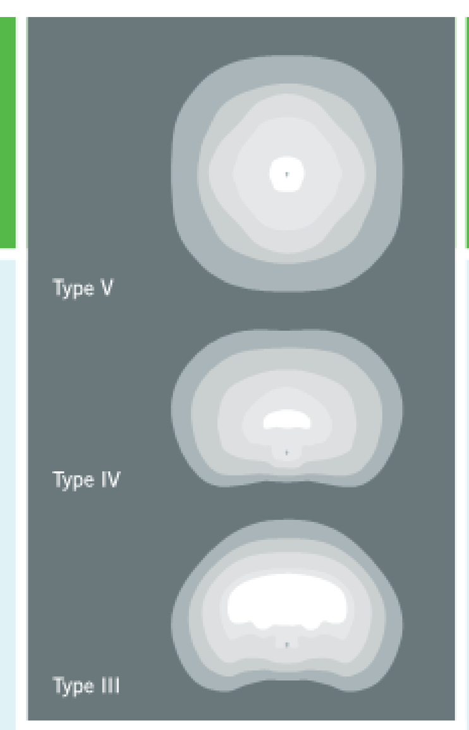
IES Backlight-Uplight-Glare (BUG) rating:[1]
- Type V | B5-U0-G3 *(zero light at and above 90°)*
- Type IV | B3-U0-G4 *(zero light at and above 90°)*
- Type III | B2-U0-G4 *(zero light at and above 90°)*

Light pattern:
- LED 205 | IED Type V *(circular)*
- LED 205 | IES Type IV *(forward throw)*
- LED 205 | IES Type III *(oval)*

IESNA Cutoff Classification: Full cutoff

Color temperature:[2] 4,000K

Warm-up and restrike time: Instant on *(no warm-up or restrike time)*



light distribution pattern

* *These are approximate replacement suggestions; actual conditions could be different.*
[1] *IES cutoff classifications have been replaced with the IES Luminaire Classification System and associated BUG ratings for backlight, uplight and glare.*
[2] *Color temperature is rated in Kelvin degrees and describes how warm or cool a light source is. The higher the number, the cooler the light source.*

Types 'D3', 'D33' & 'D4' - Shoebox Lighting

D3 - Single Fixture Type-III Distribution
D33 - Double Fixture Type-III Distribution
D4 - Single Fixture Type-IV

A+ Capable Luminaire

This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and system-level interoperability.

- All configurations of this luminaire meet the Acuity Brands' specification for chromatic consistency
- This luminaire is A+ Certified when ordered with DTL® controls marked by a shaded background. DTL DLL equipped luminaires meet the A+ specification for luminaire to photocontrol interoperability1
- This luminaire is part of an A+ Certified solution for ROAM® or XPoint™ Wireless control networks, providing out-of-the-box control compatibility with simple commissioning, when ordered with drivers and control options marked by a shaded background[1]

To learn more about A+, visit www.acuitybrands.com/aplus.

See ordering tree for details.

A+ Certified Solutions for ROAM require the order of one ROAM node per luminaire. Sold Separately: Link to Roam; Link to DTL DLL

A+ Capable options indicated by this color background.

NOTES
1. MVOLT driver operates on any line voltage from 120-277V (50/60 Hz).
2. Single fuse (SF) requires 120V, 277V or 347V. Double fuse (DF) requires 208V, 240V or 480V.
3. Also available as a separate accessory; see accessories information.
4. Top conduit entry standard.
5. Need to specify 120, 208, 240 or 277 voltage.
6. Photocell ordered and shipped as a separate line item from Acuity Brands Controls. Shorting Cap included.
7. Not available with VG or WG. See PER Table.
8. Reference Motion Sensor table.
9. Not available with Emergency options, PE or PER options.
10. Not available with 347/480V.
11. Battery pack rated for -20° to 40°C.
12. Comes with PBBW.
13. Warranty period is 3-years.
14. Not available with BBW.
15. Must order with fixture; not an accessory.

Emergency Battery Operation

The emergency battery backup is integral to the luminaire — no external housing required! This design provides reliable emergency operation while maintaining the aesthetics of the product.

All emergency backup configurations include an independent secondary driver with an integral relay to immediately detect AC power loss, meeting interpretations of NFPA 70/NEC 2008 - 700.16

The emergency battery will power the luminaire for a minimum duration of 90 minutes (maximum duration of three hours) from the time supply power is lost, per International Building Code Section 1006 and NFPA 101 Life Safety Code Section 7.9, provided luminaires are mounted at an appropriate height and illuminate an open space with no major obstructions.

The examples below show illuminance of 1 fc average and 0.1 fc minimum of the P1 power package and VF distribution product in emergency mode.

FEATURES & SPECIFICATIONS

INTENDED USE
The classic architectural shape of the WST LED was designed for applications such as hospitals, schools, malls, restaurants, and commercial buildings. The long life LEDs and driver make this luminaire nearly maintenance-free.

CONSTRUCTION
The single-piece die-cast aluminum housing integrates secondary heat sinks to optimize thermal transfer from the internal light engine heat sinks and promote long life. The driver is mounted in direct contact with the casting for a low operating temperature and long life. The die-cast door frame is fully gasketed with a one-piece solid silicone gasket to keep out moisture and dust, providing an IP65 rating for the luminaire.

FINISH
Exterior parts are protected by a zinc-infused Super Durable TGIC thermoset powder coat finish that provides superior resistance to corrosion and weathering. A tightly controlled multi-stage process ensures a minimum 3 mils thickness for a finish that can withstand extreme climate changes without cracking or peeling. Standard Super Durable colors include dark bronze, black, natural aluminum, sandstone and white. Available in textured and non-textured finishes.

OPTICS
Well crafted reflector optics allow the light engine to be recessed within the luminaire, providing visual comfort, superior distribution, uniformity, and spacing in wall-mount applications. The WST LED has zero uplight and qualifies as a Nighttime Friendly™ product, meaning it is consistent with the LEED® and Green Globes™ criteria for eliminating wasteful uplight.

ELECTRICAL
Light engine(s) consist of 98 high-efficacy LEDs mounted to a metal core circuit board and integral aluminum heat sinks to maximize heat dissipation and promote long life (100,000 hrs at 40°C, L87). Class 2 electronic driver has a power factor >90%, THD <20%. Easily-serviceable surge protection device meets a minimum Category B (per ANSI/IEEE C62.41.2).

INSTALLATION
A universal mounting plate with integral mounting support arms allows the fixture to hinge down for easy access while making wiring connections.

LISTINGS
CSA certified to U.S. and Canadian standards. Luminaire is IP65 rated. PIR and back box options are rated for wet location. Rated for -30°C to 40°C ambient.

DesignLights Consortium® (DLC) Premium qualified product. Not all versions of this product may be DLC Premium qualified. Please check the DLC Qualified Products List at www.designlights.org/QPL to confirm which versions are qualified.

WARRANTY
5-year limited warranty. Complete warranty terms located at: www.acuitybrands.com/CustomerResources/Terms_and_conditions.aspx.

Note: Actual performance may differ as a result of end-user environment and application. All values are design or typical values, measured under laboratory conditions at 25 °C. Specifications subject to change without notice.

DESIGN ALTERNATE-1 . ***Increase Maximum Block Length to 550'***
FBC Requirement:
Sect. 3.11.2.4 Block Parameters
Maximum Block Length 450'
(495' with 10% Admin. Adjustment)

Site Constraints:
i - Existing Vegetated Buffer
ii - Steep Slopes
iii - Unusual Site Configuration and Adjoining Parcel Use and Permanence/Intensity

Design Alternative-1:
Increase Block Length to 550' to Align with North Facade of Europa Center

Mitigating Factors:
1. Maximize Future Connection Opportunities,
2. Minimize Slope of Street for Future Connection,
3. Minimize Impact to Steep Slopes and Existing Tree Buffer

1 DA-1 BLOCK LENGTH
1" = 40'-0"

0 40 80 FT

DESIGN ALTERNATE-2 . ***Increase Maximum Pass-Thru Spacing to 530'***
FBC Requirement:
Sect. 3.11.2.4 Lot Parameters-D
Maximum Pass-Through Spacing 330' (346.5' with 5% Admin. Adjustment)

Site Constraints:
i - Existing Vegetated Buffer
ii - Steep Slopes
iii - Unusual Site Configuration and Adjoining Parcel Use and Permanence/Intensity

Design Alternative-2:
Increase Pass-Through Spacing to 517' Align with Future Street

Mitigating Factors:
1. Maximize Future Connection Opportunities,
2. Avoid Uninviting Service Area,
3. Minimize ADA Access Grades,
4. Minimize Impact to Steep Slopes and Existing Tree Buffer

2 DA-2 PASS-THRU
1" = 40'-0"

0 40 80 FT

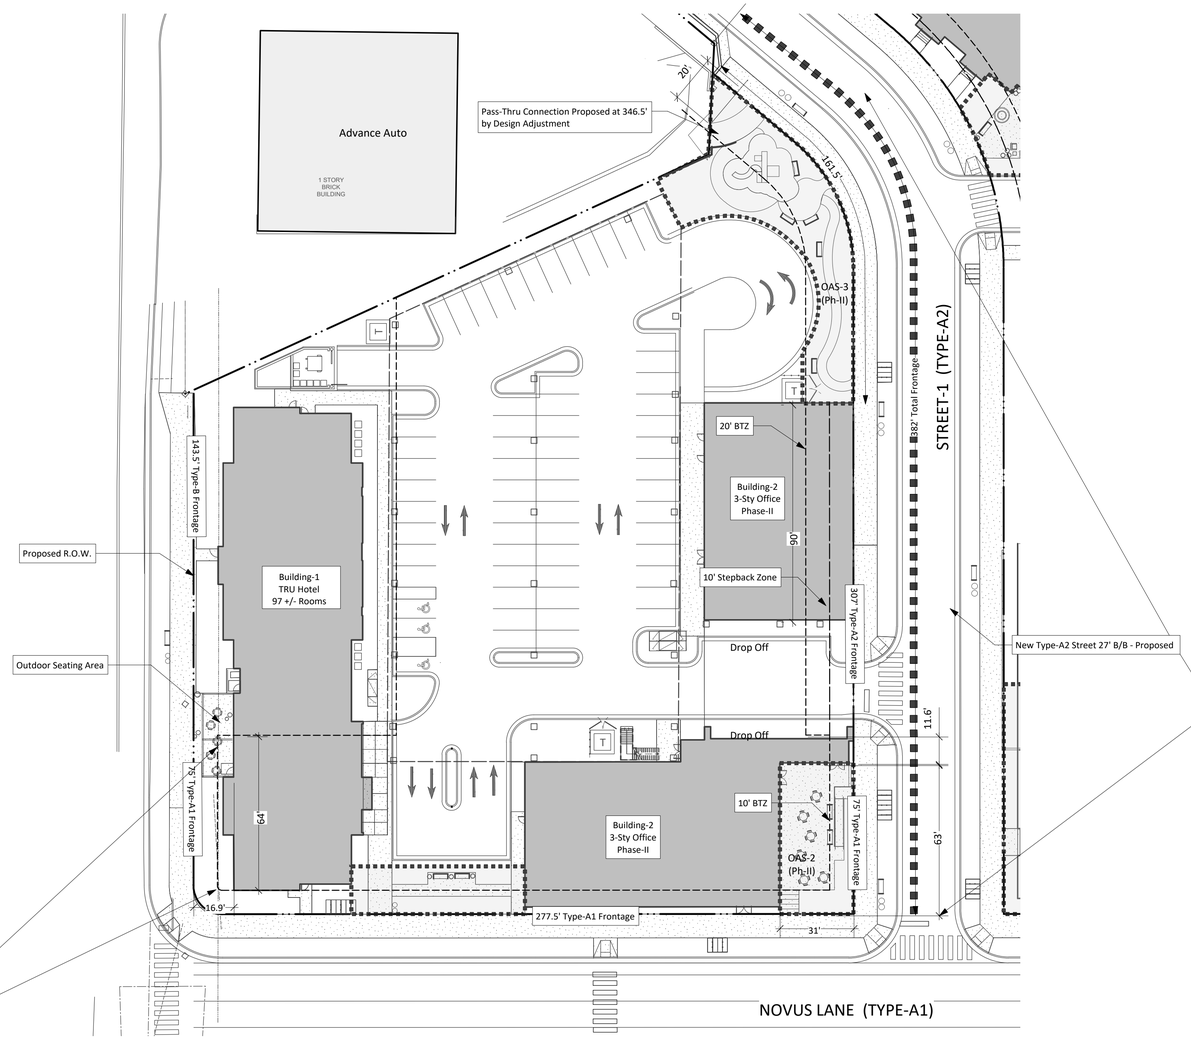
				1673.22 LF			**1748.2 LF**	**74.98 LF**	Facade & OAS Provided vs Required (Surplus)			
Design Alternate Summary: A Request to Approve....												
DA-1: ...an increase to a Block Length of 550' (450' required) along Street-1 (south).												
DA-2: ...an increase to a 517' Building Pass-Thru spacing (330' required) along Street-1 (south).												
DA-3a: ...an increase in the Build-to-Zone depth by 5' (from 10' to 17') along Fordham Service Street-Novus Lane wrap.												
DA-3b: ...an increase from 50% to 57% overall (81% in the Type-A1 wrap) in the allowable OAS maximum as a percentage of the Required Build-to-Zone Frontage (100% for Type-A1 wrap)												
DA-3C: ...an increase in the depth fo the Build-to-Zone from 10' to 15' along Novus Lane Block-2. Increases Facade from 30% to 83% (87% Overall for Novus Ln.)												
DA-4: ...a reduction from 60% to a 41% Overall Build-to-Zone Frontage along Street-2 (north side).												
DA-5: ...a reduced setback from 30' to 10' for the proposed parking deck from the proposed R.O.W. (north side).												
DA-6: ...a reduction from 60% to a 50% Overall Build-to-Zone Frontage along Street-2 (south side).												
Notes:												
Note-1: Street frontage measured to functional limits of street and does not include frontage along Advance Auto boundary.												
Note-2: Street frontage measured to functional limits of street and does not include frontage along Jiffy Lube boundary.												



DESIGN ALTERNATE-3a . ***An increase in the Build-to-Zone depth along Fordham Service Dr.***

FBC Requirement:
Sect. 3.11.2.1.D.5 Districts and Frontages
Where a corner lot has two different assigned frontages, the more restrictive frontage requirement shall apply to the assigned frontage, and must be continued for a minimum of 75'

Site Constraints:
i - Primary Building Facade is positioned 10' from proposed ROW to accommodate vertical articulation of facade and maintain a diversity of room sizes.
ii - Shifting towards ROW at corner creates conflicts with FBC Sect 3.11.2.4.3.C Building Stepback.
iii - Custom modification of building floorplan compromises affordability of lodging proposed.

Design Alternative-3a Proposed:
An increase in the Build-to-Zone depth by 7' (from 10' to 17' x 60') along Fordham Service Street-Novus Lane Type-A1 wrap.

Mitigating Factors:
1. Enhanced Vertical Architectural Articulation and Diversity of Room Sizes and Prices.
2. Overall Building Facade Within BTZ Is 162.3' vs 147.0' Required, an Increase Of More Than 10%.
3. Building Facade Along Type-B Street Within 20' of ROW Totals 92% Exceeding a Type-A2 Standard for Building Frontage.

1 DA-3a & 3b FRONTAGES, BTZ and OPEN SPACE CREDIT
1" = 30'-0"

0 30 60 90 FT

DESIGN ALTERNATE-3b ***| Block-1 Open Space as a Maximum Percentage of Required Frontages (Type-A1 Wrap & Type-A2)***
FBC Requirement:
Sect. 3.11.2.7.F.4 - Outdoor Amenity Space (d)
Outdoor amenity space may be counted to meet up to one-half (½) of the frontage distance of the build-to-zone percentage requirements

Site Constraints:
i - Unusual Site Configuration and Adjoining Intersection Spacing Requirments and Circulation
ii - No Other Means of Ingress/Egress to Structured Parking Level-2 Constrains Building Placement
iii- Recommended findings of Urban Design Analysis to Locate Outdoor Amenity Space on Corner at Type-A1 wrap

Design Alternative-3b Proposed:
An increase from 50% to 60% overall (85% for Type-A1 wrap) in the allowable OAS maximum as a percentage of the Required Build-to-Zone Frontage required along Street-1 (north side). Increase to 85% for Type-A1 wrap.

Mitigating Factors:
1. Provide External Level-2 Parking Ramp Designed to Serve as an Architectural Backdrop to Adjacent Outdoor Amenity Space.
2. Provide Prominent/High-Visibility OAS at Street Intersection to Animate Steet Activity.
3. Increase Diversity of OAS and Provide for Active Children's Play Area.

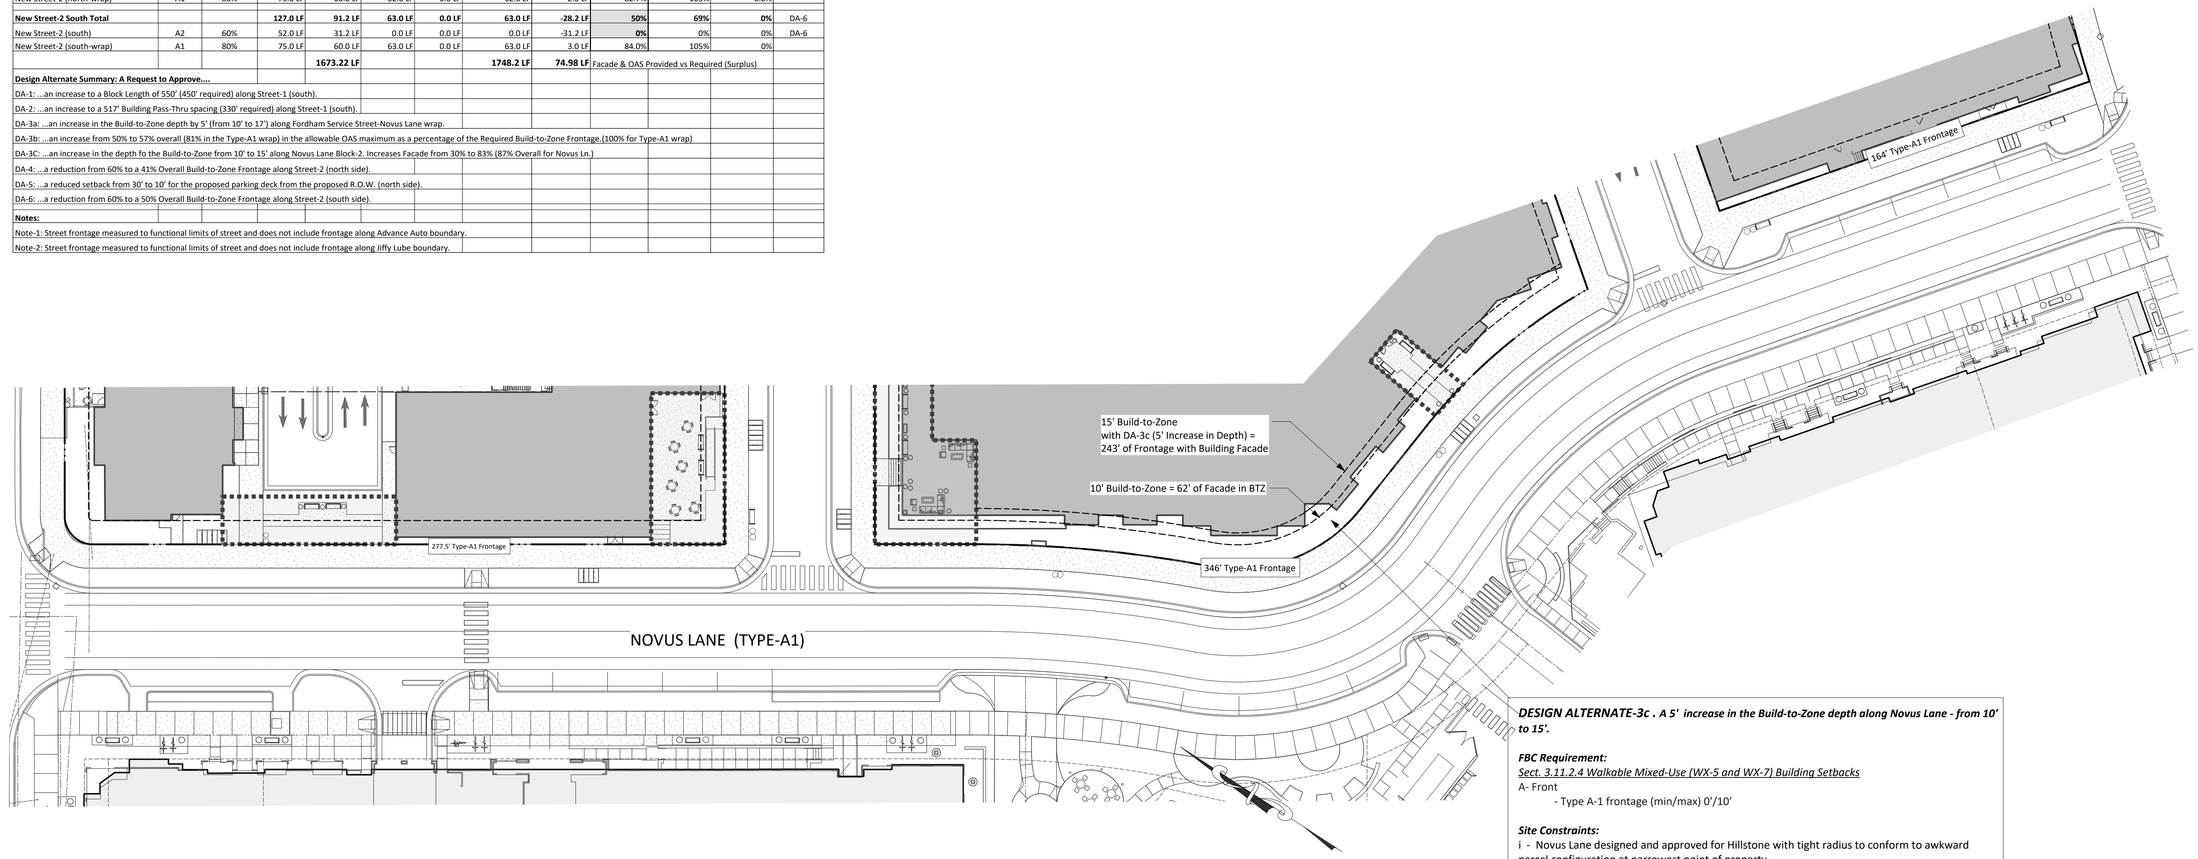
Note-1: Street frontage measured to functional limits of street and does not include frontage along Advance Auto boundary.												
Note-2: Street frontage measured to functional limits of street and does not include frontage along Jiffy Lube boundary.												



1 DA-3C NOVUS LANE BTZ | BLOCK-2
1" = 30'-0"

0 30 60 90 FT

DESIGN ALTERNATE-3c . ***A 5' increase in the Build-to-Zone depth along Novus Lane - from 10' to 15'.***

FBC Requirement:
Sect. 3.11.2.4 Walkable Mixed-Use (WX-5 and WX-7) Building Setbacks
A- Front
- Type A-1 frontage (min/max) 0'/10'

Site Constraints:
i - Novus Lane designed and approved for Hillstone with tight radius to conform to awkward parcel configuration at narrowest point of property
ii - Slope of street and FBC requirements to maintain FFE at 2'-4' interior dictates interior grade changes to floor plan that defines exterior facade
iii - Principal Entry at this frontage further constrains interior space configuration contributing to exterior facade location

Design Alternative-3a Proposed:
An increase in the Build-to-Zone depth by 5' (from 10' to 15') along Novus Lane Block-2.

Mitigating Factors:
1. Enhanced Vertical Architectural Articulation and Diversity of Room Sizes and Price Points.
2. Overal Building Facade within BTZ along Novus Lane Is 87% with DA-3c (83% for Block-2).

Design Alternate Summary: A Request to Approve....

DA-1: ...an increase to a Block Length of 550' (450' required) along Street-1 (south).

DA-2: ...an increase to a 517' Building Pass-Thru spacing (330' required) along Street-1 (south).

DA-3a: ...an increase in the Build-to-Zone depth by 5' (from 10' to 17') along Fordham Service Street-Novus Lane wrap.

DA-3b: ...an increase from 50% to 57% overall (81% in the Type-A1 wrap) in the allowable OAS maximum as a percentage of the Required Build-to-Zone Frontage (100% for Type-A1 wrap)

DA-3C: ...an increase in the depth fo the Build-to-Zone from 10' to 15' along Novus Lane Block-2. Increases Facade from 30% to 83% (87% Overall for Novus Ln.)

DA-4: ...a reduction from 60% to a 41% Overall Build-to-Zone Frontage along Street-2 (north side).

DA-5: ...a reduced setback from 30' to 10' for the proposed parking deck from the proposed R.O.W. (north side).

DA-6: ...a reduction from 60% to a 50% Overall Build-to-Zone Frontage along Street-2 (south side).

Notes:

Note-1: Street frontage measured to functional limits of street and does not include frontage along Advance Auto boundary.

Note-2: Street frontage measured to functional limits of street and does not include frontage along Jiffy Lube boundary.

Design Alternate-5: ***Reduced setback for the proposed parking deck from the proposed R.O.W. (north side).***

FBC Requirement:
Sect. 3.11.2.5 Frontages - Parking Location
Structured parking: 30' minimum behind front building facade for all floors

Site Constraints:
i - Steep Slopes
ii - Unusual Site Configuration and Circulation Limits Structured Parking Deck Placement and Ramping Opportunities
iii - Adjacent Parcel Use and Circulation Dictate Future Connection Alignment

Design Alternative-5: Allow a reduced setback from 30' to 10' for the proposed parking deck from the proposed R.O.W. (north side).

Mitigating Factors:
1. Align Street to Maximize Opportunity for Future Connection to Europa Drive, Provide Best Visibility and Minimize Slope of Future Connection
2. Minimize Impact to Steep Slopes,
3. Accommodate Needed Fire Access to Garage Parking and Turnaround Requirements
4. Position Parking Facilities and Circulation in Close Juxtaposition to Other Parking Structures

Design Alternate-6: ***A reduction from 60% to a 50% Overall Build-to-Zone Frontage***

FBCRequirement:
Sect. 3.11.2.4 Build-to-Zone Type-A2 Street
Build-to-Frontage on Type-A2 Streets = 60%

Site Constraints:
i - Existing Vegetated Buffer
ii - Steep Slopes
iii - Unusual Site Configuration and Adjoining Intersection Spacing and Circulation - Street Alignment Restricted Due to Intersection Offset with Novus Ln.
iv - No Other Means of Ingress/Egress to Parking Deck for Fire or Garage Access to Proposed Residential Building

Design Alternative-6: Allow a reduction from 60% to a 50% Overall Build-to-Zone Frontage along Street-2 (south side).

Mitigating Factors:
1. Align Street to Accommodate Novus Ln. Intersection Offset,
2. Maximize Opportunity for Future Connection to Europa Service Drive,
3. Minimize Impact to Existing Vegetated Buffer and Steep Slopes,
4. Accommodate Essential Fire Access to Garage Parking and Turnaround Requirements

Design Alternate 4: ***A reduction from 60% to a 41% Overall Build-to-Zone Frontage***

FBC Requirements:
Sect. 3.11.2.4 Build-to-Zone Type-A2 Street
Build-to-Frontage on Type-A2 Streets = 60%

Site Constraints:
i - Existing Vegetated Buffer
ii - Steep Slopes
iii - Unusual Site Configuration and Adjoining Intersection Spacing and Circulation - Street Alignment Restricted Due to Intersection Offset with Hillstone Dr.
iv - No Other Means of Ingress/Egress to Garage for Fire

Design Alternative-4: Allow a reduction from 60% to a 41% Overall Build-to-Zone Frontage along Street-2 (north side).

Mitigating Factors:
1. Align Street to Accommodate Novus Ln. Intersection Offset,
2. Maximize Opportunity for Future Connection to Europa Drive and Offset Parking Garage Entrance,
3. Minimize Impact to Existing Vegetated Buffer and Steep Slopes,
4.Provide for Essential Fire Access to Garage Parking and Turnaround Requirements.
