 - a. **On a lot developed according to the Conventional conditions, the required minimum percentage of lot width does not apply. However, the street-facing building façade(s) of each principal structure must meet the maximum setback requirement for at least two-thirds (2/3) of the façade width.**
 - b. **On a lot developed according to the Enhanced Development Option conditions,** ~~The~~ the required percentage specifies the amount of the front building façade that must be located in the build-to zone, measured based on the width of the building divided by the buildable width of the lot.

3. On a Type A Frontage on a corner lot, a building façade, outdoor amenity space, outdoor dining area, and/or building element must be ~~within the build-to zone~~ **to meet the maximum setback requirement** within the build-to zone for the first 30 feet along the street extending from the block corner, measured from the intersection of the two right-of-way lines.

SECTION 7

Section 3.11.2.7. Measurements and Exceptions, Subsection T. Mass Variation, subsections 2 and 3 are hereby revised to read as follows:

- "2. *Building Step Back*. The building step back shall be measured as the horizontal change in the building wall plane, perpendicular to the applicable frontage or property line.
- In addition to applicable frontages, a 10' building step back above the second or third floor is also required for buildings four stories or greater at the boundary of the Form District.
 - A 20' building step back above the second or third floor is required for the primary street frontage of a building that utilizes an upper story bonus in accordance with Section 3.11.2.7.T.1.a. A building façade located outside of the build-to zone remains subject to this requirement.
 - A building step back is not required where a street-facing façade is located **at the maximum setback line or** outside of the ~~build-to zone~~ **maximum setback**, and is not the primary frontage of a building that utilizes an upper story bonus, or where a building façade facing the Form District boundary is located more than 20' from the boundary.
3. *Module Offset*. The module offset shall be measured as the horizontal change of a portion of the building wall plane at ground level, perpendicular to the applicable frontage. The module width shall be measured for the portion of the wall plane closer to the sidewalk, while the width of offset shall be measured for the portion further from the sidewalk. The dimensions of modules and offsets should maintain a sense of proportion to the building as a whole.
- Offset areas may count towards a build-to zone requirement when the area meets the criteria for a forecourt, outdoor amenity space, or outdoor dining area.
 - A module offset is not required where a building façade is located **at the maximum setback line or** outside of the ~~build-to zone~~ **maximum setback**."
