

Petition

To: Mayor and Council
From: CHALT
Date: May 22, 2019

David Finley presented to the Town Council a traffic update on May 1. This petition requests that the town provide the underlying DOT raw data that supports the staff conclusions.

The staff conclusions are at odds with the “perceptions” of residents that have personal experience with Town traffic. The DOT data is also at odds with the data presented later in the presentation to Council that consultants' traffic counts at major intersections in Town have increased by up to 25% over just the last two years and that travel time along major corridors has also increased by similar amounts during this time.

It's essential that this underlying data be shared in order for the Council and the public to understand the staff report.

Thank you for addressing this request.
